## EDUCATION

### Advanced React, TypeScript

*Scrimba*

React, TypeScript

### Frontend Development

*Codecademy*

HTML, CSS, JS, React

### MTS Theological Studies

*Boston College*

Boston, Massachusetts

### MA Theatre Education

*Emerson College*

Boston, Massachusetts

## ABOUT ME

With an eclectic background in storytelling and entrepreneurship, I bring a unique approach to frontend and UX/UI projects, along with a strong ownership mentality. In addition, my four-year journey in remote work has prepared me to join a collaborative team, building products that enhance users' lives.

## PROJECTS

### Today's Todos (click to view)

*Tech Used: React, useEffect, useState, localStorage*

**Initial Question:** How will moving a Vanilla JS CRUD app into React effect the localStorage API?

**Discovery:** By utilizing useEffect to run Local Storage and set a single state, I was able to manage multiple lists, handle new items, and clear lists while maintaining consistency across reloads.

**Next Steps:** Explore how react-beautiful-dnd will affect app architecture and expand UX. Users will have the ability to drag and drop list items and customize list names.

### Daily Tarot (click to view)

*Tech Used: JavaScript, ChatGPT API, Express.js, Node.js*

**Initial Question:** How can Express.js be utilized to handle website security?

**Discovery:** After moving the API key to a .env file, I established a Node.js server with Express.js, which streamlined requests and separated client-side DOM manipulation, leading to greater clarity and efficiency.

**Next Steps:** This project's next evolution uses Next.js and TypeScript for the frontend and Java for backend storage, enabling users to save readings and record their thoughts in an online journal.
